# REA mission

***The REA unit B5 aims at ensuring that benefits of research and innovation are maximised and widely distributed across the Union and at building effective cooperation between science and society.***

*To this end the unit implements, on behalf of the Commission, actions from two specific objectives in Horizon 2020 by launching calls for proposals and funding projects dealing with the implementation of the Innovation Union and the reinforcement of the European Research Area (ERA):*

*– the 'Spreading Excellence and Widening Participation' programme, aiming at strengthening research and innovation performance, encouraging stronger participation in Horizon 2020 and facilitating partnering opportunities among EU Member States;*

*– the 'Science with and for Society' programme, aiming, among other things, at making scientific and technological careers attractive to young students, promoting gender equality in research, encouraging citizen participation in science and promoting an ethics framework for research and innovation*
